Pegasus Announces Support for High Capacity Low Cost Blu-ray Storage Drives and Libraries for Archive and Compliance Applications

Symantec Vision Conference – San Francisco, CA – May 8, 2006 - Pegasus, a leading supplier of file system and media management software for archive and compliance application solutions announced today support for Panasonic's new Blu-ray high capacity drives and DISC's Blu-ray based storage libraries within it's InveStore® software. The new Blu-ray storage configurations combine high capacity and performance at a very low cost and provide the flexibility and security of both Rewritable and WORM media.

Pegasus' InveStore storage management software is sold through major OEMs, ISV developers and integrators who incorporate into email archive, file system archiving, document imaging and information lifecycle management solutions sold to the financial, healthcare, entertainment, government, transportation and hospitality markets. As an example, Pegasus' InveStore is Symantec's certified media manager for removable optical media for use with Enterprise Vault and NetBackup.

"With so many new regulations requiring long term data storage of critical information, government, industry and self-imposed, there are significant benefits to the end user in utilizing a tiered storage solution that provides the security of WORM and the cost effectiveness and scalability of removable media." said Roy Slicker, President of Pegasus. "The combination of the Pegasus software and new Blu-ray storage provides feature rich secure data and volume management, high security and performance, simple disaster recovery methods and cost effectiveness unmatched by many other solutions."

“With single-layer recordable and ROM media that can hold 25GB of content and dual-layer versions of the discs that can hold 50GB, Blu-ray Disc drives offer users the most capacity for diverse customer features and benefits that go beyond those of today’s conventional optical discs, said Tony Jasionowski, senior group manager, Panasonic Corporation of North America. “Increasing data volume on personal computers and the rapid growth of HDTV have accelerated consumer demand for an optical drive that can read and record massive PC data as well as HDTV content at home. Panasonic is confident that the new Blu-ray Disc drive and discs will meet this growing demand.”

“The Pegasus InveStore support for the DISC Blu-ray libraries provides the much needed connectivity to the Symantec storage management product portfolio.” said Horst Schellong, President of DISC Storage LLC. He further commented, “The DISC Blu-ray product family covers a capacity range from 1TB to 34TB with end user pricing ranging under 2US\$/GB. This product and technology market entry marks the step into a new era with very affordable secure and permanent mass storage. It is a much anticipated product supporting the multi-tier storage strategy.”

About Pegasus

Pegasus Disk Technologies, Inc., headquartered in San Ramon, CA develops archive storage management software for archive and compliance applications. Founded in 1988, Pegasus has developed long-term strategic partnerships with leading developer ISVs and OEMs that use its products to manage storage devices within their applications. Pegasus is located at 2333 San Ramon Valley Blvd., San Ramon, California, 94583 and can be reached by phone at (925) 314-1800, by fax at (925) 314-1801 or on the World Wide Web at <http://www.pegasus-afs.com>.
