Pegasus Announces Qualification with VERITAS NetBackup Storage Migrator

San Ramon CA, August 5, 2002 –Pegasus Disk Technologies announces qualification of its InveStore[®] Version 4.0 archive management software with VERITAS NetBackup Storage Migrator[™]. The combination of VERITAS NetBackup Storage Migrator[™] and InveStore allows file system migration with archive media support such as write-once magneto optical and DVD for Windows[®] 2000 platforms. The flexibility and scalability of InveStore v4 are ideal for the large-scale, multiple platform environments in which VERITAS NetBackup Storage Migrator customers already operate.

Pegasus, a leading provider of archive storage management software, now offers archive media support for companies migrating data with VERITAS Software solutions. Pegasus provides the archive media connectivity while VERITAS provides the automated data movement, with transparent access for users and applications.

“Pegasus is pleased to be working with VERITAS Software to provide an integrated archive solution,” said Roy Slicker, President and CEO, Pegasus Disk Technologies. “The combined products allow customers to perform storage consolidation while maintaining transparent user and application access to data. Both products help provide additional customer return on investment through the utilization of shared VERITAS Software resources in a fully automated archive environment.”

“The archive capability added by Pegasus is significant because it offers enhanced functionality by combining the power of VERITAS NetBackup Storage Migrator™ with archive media support of Pegasus InveStore,” said Jerry Hoetger, senior manager, product marketing, VERITAS Software.

InveStore v4 is an easy to implement software solution for managing storage devices under Windows® NT and 2000. It provides Explorer like functionality, while maintaining compatibility and support for the historical media and devices that are used for storage management. It also provides for the ability to expand single-volume limitations, spanning multiple volumes for increased data archival capability. InveStore goes beyond similar products by providing greater functionality and enterprise level control of the data storage system and its individual components.

Designed for enterprise-wide deployment, VERITAS NetBackup Storage Migrator improves administrator productivity and provides virtually unlimited archive disk storage to the user by moving infrequently used data to InveStore for archive storage. The transferred data is automatically and transparently recalled to local storage when accessed by a user or application. InveStore integrates with VERITAS NetBackup Storage Migrator to transfer data from primary Windows® 2000 storage to any InveStore server for Windows® across the enterprise. This integration allows users to use a single interface and repository for backed-up and migrated archive data.
